Features

The Drag Back Chain from BE&E is the most effective way to make your chain floor bin an accurate feeding device.

Live chain conveyors tend to pack material along the top edge of the exit opening, causing strain on the wall of the bin. Our solution removes all the pressure against the exit wall. In fact, the exit wall can be removed entirely.

- Drive mechanism greatly reduces horsepower to operate, meaning lower electricity costs
- Lower strain on all components involved, increasing lifespan
- Accurate, reliable flow of materials
- Can be installed into existing bins
- Can handle large amounts of material easily without clogging or stoppage
